introduction to computing systems answers Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal. Three significant characteristics of distributed ...

introduction to computing systems answers Cloud computing is everywhere these days, but not everyone knows exactly what it is. Cloud-computing services—like the ones offered by Microsoft, Google, and Amazon—take care of storage, software updates, backup, file synchronization, security, and all the other computing tasks that can take time and resources away from your core business.

introduction to computing systems answers Concurrent computing is a form of computing in which several computations are executed during overlapping time periods—concurrently—instead of sequentially (one completing before the next starts). This is a property of a system—this may be an individual program, a computer, or a network—and there is a separate execution point or "thread of control" for each computation ("process").
