object oriented database systems concepts and architectures An object database is a database management system in which information is represented in the form of objects as used in object-oriented programming. Object databases are different from relational databases which are table-oriented. Object-relational databases are a hybrid of both approaches.. Object databases have been considered since the early 1980s.

object oriented database systems concepts and architectures Object-oriented programming is more than just classes and objects; it's a whole programming paradigm based around objects (data structures) that contain data fields and methods. It is essential to understand this; using classes to organize a bunch of unrelated methods together is not object orientation.
