science in clothing comfort pdf

science in clothing comfort Thermal comfort is the condition of mind that expresses satisfaction with the thermal environment and is assessed by subjective evaluation (ANSI/ASHRAE Standard 55). The human body can be viewed as a heat engine where food is the input energy. The human body will generate excess heat into the environment, so the body can continue to operate.

Thermal comfort - Wikipedia

science in clothing comfort Clothing (also known as clothes, apparel and attire) is a collective term for items worn on the body. Clothing can be made of textiles, animal skin, or other thin sheets of materials put together. The wearing of clothing is mostly restricted to human beings and is a feature of all human societies. The amount and type of clothing worn depend on body type, social, and geographic considerations.

science in clothing comfort [The] American business community was also very impressed with the propagandist effort. They had a problem at that time. The country was becoming formally more democratic.

Propaganda by Edward Bernays (1928)

science in clothing comfort Nylon and polyester are both synthetic fabrics, but nylon production is more expensive, which results in a higher price for the consumer. Nylon also tends to be more durable and weather-resistant, which is why it is more likely to be used in outdoor apparel or gear. Both fabrics are flame retardant, but nylon is stronger, while polyester is more heat-resistant.
