ttl logic data book Transistor transistor logic (TTL) is a logic family built from bipolar junction transistors. Its name signifies that transistors perform both the logic function (the first "transistor") and the amplifying function (the second "transistor"); it is the same naming convention used in resistor transistor logic (RTL) and diode transistor logic (DTL). ...

ttl logic data book 1 Introduction HCMOS data sheets specify, under recommended operating conditions, input tt = 1000 ns, (10% 90%) for VCC = 2 V. If certain devices are used in the threshold region (from V ILmax = 0.5 V to V IHmin = 1.5 V), there is a potential to go into the wrong state from induced grounding, causing double clocking.
